PATENTS-IN-SUIT

10. HDI is the owner of all right, title, and interest in and to U.S. Patent No. 8,752,141 (the “’141 Patent”), entitled “Methods for Presenting and Determining the Efficacy of Progressive Pictorial and Motion-Based Captchas,” issued on June 10, 2014. A true and correct copy of the ’141 Patent is attached hereto as **Exhibit A**.

11. HDI is the owner of all right, title, and interest in and to U.S. Patent No. 9,192,861 (the “’861 Patent,” and together with the ’141 Patent “the Patents-in-Suit”), entitled “Motion, Orientation, and Touch-Based Captchas,” issued on November 24, 2015. 13. The Patents-in-Suit are directed to, *inter alia*, methods for distinguishing a human from a computer using a graphical/pictorial and/or motion-based verification or challenge system(s).

DEFENDANT’S ACTS

14. Defendant offers and/or operates one or more website(s), for example the website accessible at <https://cvshealth.com>. Defendant directs customers and other end-users that wish to access offerings, resources, services, electronic transactions, and/or purchases from Defendant to visit <https://cvshealth.com>.

15. Defendant protects access to certain resources and/or content of its website(s) from Internet bots (a/k/a web bots or robots), which are automated software applications that run tasks over the Internet with minimal, if any, human intervention. Defendant restricts access to these

protected resources/content through the use of Completely Automatic Public Turing Test to Tell Humans and Computers Apart (“CAPTCHA”). Specifically, Defendant implements Google’s reCAPTCHA v2 framework on its commercial websites, as exemplified at the URL <https://cvshealth.com/news-and-insights> of Defendant’s website, as a precondition to customers, end-users, or third parties accessing the protected website resource or content.

16. Defendant creates or registers a reCAPTCHA account with Google to obtain an individualized API key. Defendant incorporates source code and other computerized instructions, including the individualized reCAPTCHA API key, into the architecture, design, and construction of its website(s). That source code incorporated by Defendant into its website(s) directs and controls the electing, associating, presentation, processing, and calculation of information related to the graphical/pictorial and/or motion-based CAPTCHA presented to a user of Defendant’s website(s). Google enjoys various benefits from Defendant’s implementation of reCAPTCHA v2

in Defendant's website, for example "using the [reCAPTCHA] solutions to digitize text, annotate images, and build machine-learning datasets." *See, e.g.,* <https://support.google.com/recaptcha/?hl=en>.

17. Defendant's HTML and JavaScript code and other computerized instructions perform or direct and control the performance of the following actions, among others: When a customer, end-user, or other third party wishes to access a protected resource or content of Defendant's website(s) and is suspected of being a robot, Defendant's website(s) displays an image-based CAPTCHA. When Defendant first displays the image-based CAPTCHA, 9-image tiles are shown to the website user. Defendant instructs the user to select all tiles within the displayed tiles that contain a certain concept, for example fire hydrants, crosswalks, buses, street signs, etc. As the user selects or clicks on an image-tile, the tile is replaced, and an additional image tile(s) is shown to the user. Defendant further instructs the participant to click "VERIFY" once no tiles with the specified concept remain. At the verification stage, the user's responses are either deemed accurate (no remaining tile of the image contains the specified concept) or inaccurate (any tile of the image contains the specified concept).

18. Defendant's HTML and JavaScript source code and other computerized instructions perform or direct and control the performance of the following actions, among others: When a customer, end-user, or other third party wishes to access a protected resource or content of Defendant's website(s), Defendant's website(s) automatically loads a checkbox labeled "I'm not a robot". Defendant instructs and requires the user to check the box in order to access the protected record and processes, for example, the user's mouse movements and click manipulation. If such movements and/or manipulation from the user meet a required threshold, the user is deemed human and granted access to the protected resource or content.
